

DRILLER'S INTERCOM

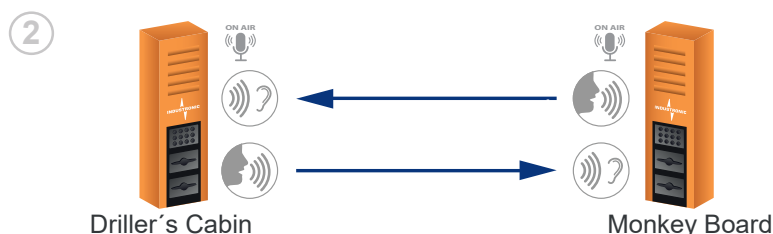

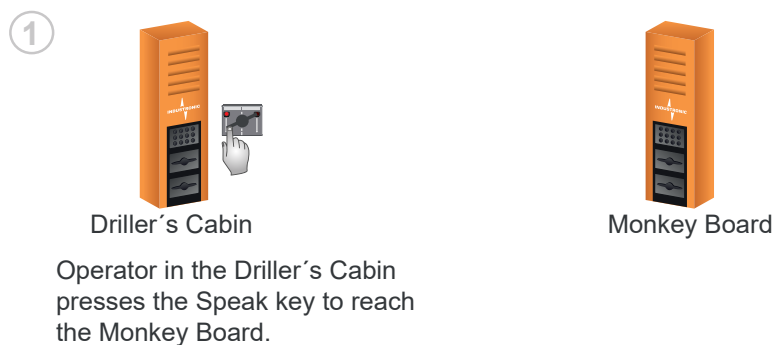

// **HandsFree DUPLEX**
by INDUSTRONIC

IN A NUTSHELL

With a simple key press, the operator in the Driller's Cabin establishes a full-duplex connection to a pre-defined target. A full duplex connection is established immediately, allowing both subscribers to speak and listen simultaneously.

Due to the integrated echo cancellation, no acoustic feedback occurs. There is no need to press any keys during the call, providing convenient hands-free communication. The hands remain free and the drillers can proceed with their work while speaking.

ILLUSTRATION

To terminate the voice connection, the operator in the Driller's Cabin presses the corresponding key again. Alternatively, the operator on the Monkey Board can terminate the voice connection with a simple key press.

DRILLER'S INTERCOM

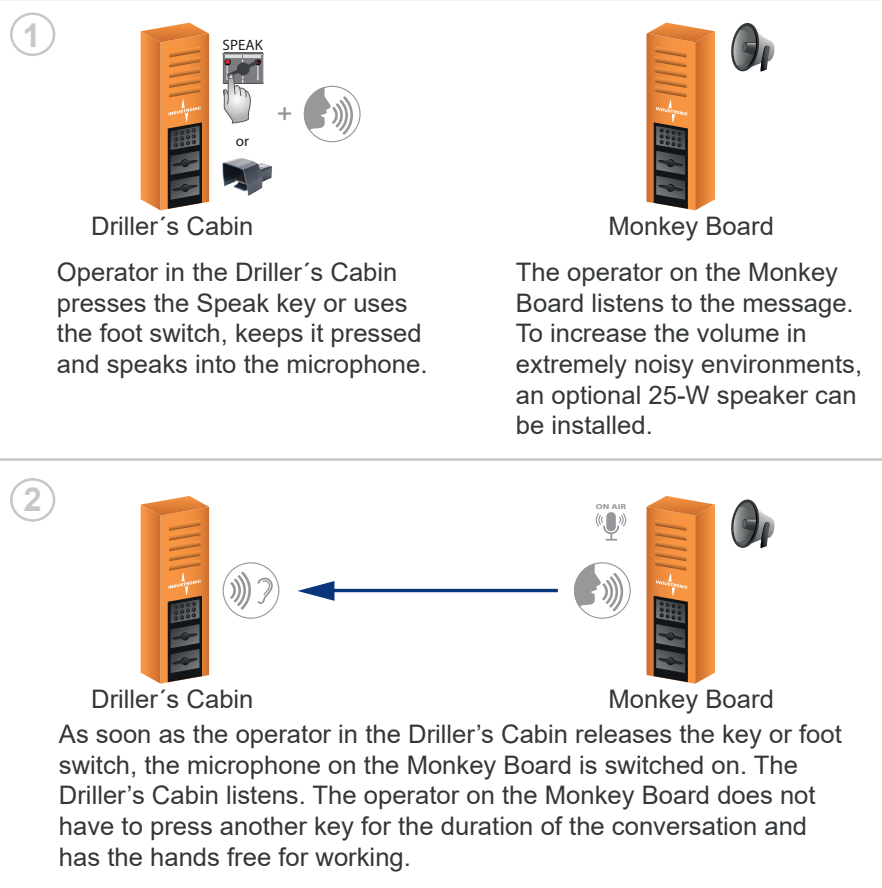

CONTROLLED HANDSFREE

IN A NUTSHELL

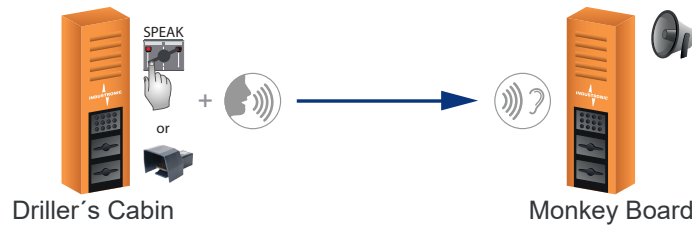

By simply pressing a key or using a foot switch, the operator in the Driller's Cabin establishes a voice connection to a pre-defined target. At the target station, the microphone is automatically switched on. The Driller's Cabin listens to what is being said and controls the conversation from the cabin.

The operator at the target station does not require to press another key. His hands remain free and he can continue with his work while speaking.

ILLUSTRATION

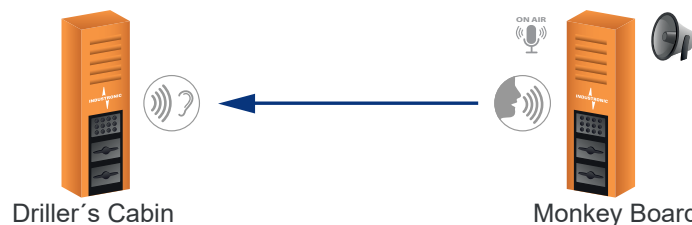

3

To speak to the Monkey Board, the operator presses the Speak key or uses the foot switch, keeps it pressed and speaks into the microphone.

The operator on the Monkey Board listens to the message.

4

As soon as the operator in the Driller's Cabin releases the key or foot switch, the microphone on the Monkey Board is switched on again. The Driller's Cabin listens.

5

To terminate the voice connection, the operator in the Driller's Cabin or on the Monkey Board presses the corresponding Delete or # key on the dial keypad.

CUSTOMER BENEFITS & APPLICATION EXAMPLES

- Driller's Intercom for onshore and offshore drilling rigs
- Handsfree Duplex for convenient handsfree communication - the hands remain free for other activities
- High speech intelligibility by suppressing background noise, ensuring clear communication between the workers - even in noisy environments
- Targeted, clear instructions ensure smooth work processes and minimize the risk of accidents
- Fast coordination of work steps in extreme environments
- No acoustic feedback due to echo cancellation
- Easy operation of intercom stations and fast call setups

OPTIONS

Driller's Intercom Handsfree Conferences

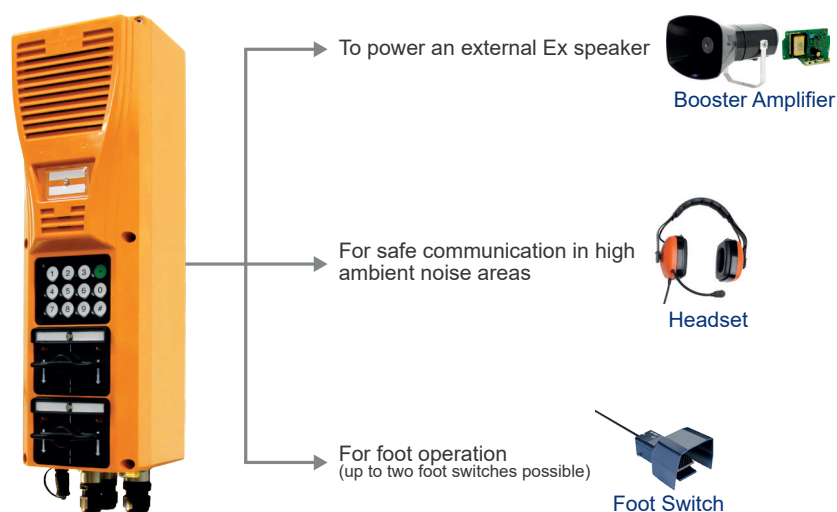

For simultaneous communication with the entire drilling crew, conferences can be held in full-duplex mode. For this purpose, each intercom station is equipped with the handsfree duplex feature.

This allows each conference participant to speak and listen at any time without having to press a key. Your hands remain free for other activities.

Conference participants can be pre-defined or freely selected as required.

Accessories

The intercom stations can be expanded with external components.
